INJURY AND ILLNESS PREVENTION PROGRAM

ACKNOWLEDGEMENT

The School District has developed this Injury and Illness Prevention Program (IIPP), with the objective of maintaining a safe and healthful work environment for all employees. This program is in compliance with the California Labor Code Section 6401.7, and the California Code of Regulations Title 8, Sections 1509 and 3203, and it consists of the following elements:

- Responsibility
- Compliance
- Communication
- Hazard Assessment
- Hazard Correction
- Accident/Exposure Investigation
- Training and Instruction
- Recordkeeping

The District has developed a comprehensive Safe Schools Plan, to provide a safe learning environment for employees, volunteers and students. The safety of the children and personnel is the paramount priority of School District. The Injury and Illness Prevention Program (IIPP) for employees and volunteers works conjunctively with said plans.

Safety and accident prevention are essential to the School District. We strive to prevent injuries to staff, students and volunteers. By making safety a high priority for every employee and volunteer, we attempt to reduce injuries and illnesses, increase productivity, and promote a safer and healthier environment for all individuals at the School District. We also want to protect our environment and community. As it is necessary, we will contract with experts in specialized fields of safety and health to meet these goals.

The School District will provide the tools and education necessary for every employee and volunteer to work efficiently and safely. We expect these individuals to willingly follow and utilize the procedures set forth. We also expect that employees and volunteers will provide feedback to us when better methods or new ideas come to their attention. Any person may contact the School District directly to communicate a concern.

RESPONSIBILITY

Safety Official

The ultimate responsibility for the School District Injury and Illness Prevention Plan (IIPP) rests with the Director of Maintenance, Operations and Transportation. In this program, this person will be referred as the Safety Official:

Name: Van Nguyen

Title: Director, Maintenance, Operations, and Transportation

Address: 1585 Roger St. Milpitas, CA 95035

Telephone: (408) 635-2888 ext. 6520

Email: vanguyen@musd.org

Responsibilities include:

- Working with the Leadership Team of representatives at school sites on health and safety issues.
- Working with upper management to develop safety and health guidelines and policies.
- Preparing and distributing the District's IIPP and General Safe Work Practices.
- Maintaining current information on local, state and federal safety and health regulations.
- Serving as liaison with governmental agencies.
- Planning, organizing and coordinating safety trainings.
- Develop department specific safe work practices as necessary.
- Developing safety and health inspection guidelines and follow up procedures to ensure necessary corrective action is taken.
- Reviewing injury and illness trends.
- Scheduling and participating on the Safety Committee and its practices.
- Establish a system for maintaining the records of inspection, hazard identification, correction and training.

Program Directors and Managers

- Ensuring appropriate job specific safety training is received.
- Ensuring workplace safety and work practices and procedures are clearly communicated and understood by employees and volunteers through training programs.
- Enforcing health and safety rules fairly and uniformly related to job performances.
- Ensuring safety responsibilities are outlined in the job descriptions, which govern the employees and volunteers under their direction.
- Evaluating employee compliance with safety guidelines and practices.
- Acknowledge employees and volunteers who make a significant contribution to maintenance of a safe workplace and disciplining employees who fail to follow safe work practices.
- Encourage employees and volunteers to report workplace hazards without fear and reprisal.
- Ensuring periodic, scheduled workplace inspections are conducted and that identified health and safety deficiencies are corrected in a timely fashion.
- Ensuring accidents and injuries are reported and investigate promptly.
- Ensuring inspections/investigations and employee health and safety records are kept for the designated period of time.

- Purchasing appropriate personal protective equipment (PPE).
- Ensuring workplaces and equipment are safe, well maintained, and in compliance with external agency regulations and district's policies, programs and practices.

Employees and Volunteers - Immediate responsibility for workplace health and safety rests with each individual employee and volunteer. This involves:

- Following the established work procedures and safety guidelines in their area, as well as those identified in this program.
- Keeping them informed of conditions affecting their health and safety.
- Adhering to health and safe practices in their workplace.
- Using personal protective equipment as required to protect them from identified hazards.
- Prompt reporting to their managers of potential hazards in the workplace, injuries and/or accidents or any unsafe condition.

COMPLIANCE

The School District shall ensure that employees and volunteers comply with safe and healthy work practices. The School District strives to maintain a safe and healthful work place for all employees, volunteers and students. Our experience shows that the effort taken to recognize and correct safety violations is cost effective and helps to improve the quality of educational services.

- Program Directors and Managers are responsible for establishing and maintaining good health and safety practices.
- Program Directors and Managers will be responsible for recognizing constructive safety efforts for all employees and volunteers.
- They will encourage employees and volunteers to make safety recommendations, which can be implemented.
- Employees recognized for following safe and healthful work practices.
- Every employee and volunteer is expected to participate in the District's safety program.
- Overall job performance evaluations will include an aspect of safety involvement. Program Directors and Managers will also recognize those employees or volunteers not following safe work practices that have been explained to employees. Disciplinary action will begin for employees and volunteers, according to district procedures.
- Employees and volunteers receive initial training and retraining, as necessary or as required.
- Health and safety practices are integrated into new employee job descriptions and performance appraisal.
- Employees and volunteers are encouraged to report safety and health concerns with no fear of reprisal.

The District is aware occupational safety and health regulations and workplace practices are designed to reduce or eliminate employee occupational injuries and illnesses. However, the regulations and work practices are only effective if all employees faithfully abide by them. Therefore, the District, through the Safety Committee, will implement a system or systems to ensure that all employees comply with workplace safety and health practices. The committee will review and update the IIPP annually.

In the case of a workplace injury or illness, employees who do not have a Designated Physician form on file should obtain medical treatment at the one of the Districts front-line providers.

The system or combinations of systems will include any one or a combination of the following:

- Training
- Newsletters
- Intranet
- Board Policies and Procedures
- Disciplinary letters for non-compliant employees
- Handbooks

COMMUNICATION

We recognize open, two-way communication between management and staff on healthy and safety issues is essential to an injury-free, productive workplace. The following system of communication is designed to facilitate a continuous flow of safety and health information between management and staff in a form that is readily understandable and consistent of one or more of the following items:

- New work orientation is completed with HR on a one on one basis.
- Review of the District's IIPP workplace safety and health training programs.
- Regularly scheduled safety meetings.
- Effective communication of safety and health concerns between workers, supervisors, including translation where appropriate.
- Posted or distributed safety information.
- A system for workers to report workplace hazards.
- A District Safety Committee, which meets regularly, prepares minutes of the safety committee meetings, reviews the months inspections, accidents and exposures as necessary with a goal and objective of maintaining a safe and healthy work environment.

Communication will consist of any one or combination of the following:

- Newsletters
- District Board Policies and Procedures
- Intranet
- Annual and monthly trainings
- Postings

It is the responsibility of the employee to read and understand the material provided to them.

NEW EMPLOYEES

Materials are provided to new employees during the onboarding process and/or at a new employee orientation informing them of the OSHA safety regulations, reporting procedures, and responsibilities.

MISCELLANEOUS

When appropriate, the District may use written communications such as inter-district memos, newsletters, and workplace postings to supplement the previously described systems and further communicate to employees on matters relating to workplace safety and health. It is the responsibility of the employee to use the tools provided to stay informed of policies, procedures and changes.

MEETINGS

Meetings will be a part of the District's safety functions. The meetings are intended to be brief sessions to discuss one or more safety items and encourage open discussions between employees and management. The District safety committee meetings cover a main topic each monthly meeting. The safety committee is responsible for ensuring the District provides all students and staff with a safe and healthful workplace.

The Safety Committee is intended to standardize various safety programs and procedures into an effective, uniform program and to ensure compliance with State and Federal Safety regulations. The Safety Committee monthly minutes will be posted on the Intranet or common spaces for all employees.

Documentation will include at minimum, the following:

- Meeting topic(s)
- Recommendations, which may improve workplace safety
- List of attendees
- Date of meeting
- Time and length of meeting
- Action items and completion dates
- Review of any work accidents/injuries that have occurred since the last meeting and recommendations for prevention of such injuries in the future
- Inspections and recommendations for correction of any hazards identified

HAZARD ASSESSMENT

Periodic inspections to identify and evaluate workplace hazards are performed by professional from DSA, SCCSIG, Fire Department, various Consultant Services and District Maintenance and Operations staff. Inspections include, but are not limited to the following:

- Asbestos Hazard Emergency Response Act (AHERA). Inspections (6 months/3 years)
- DSA Design Reviews and Inspections by Inspector of Record for Construction Projects
- Food Service Inspections
- Fire Department, Annual Inspections
- Fire System Inspections and Tests (6 months).
- Groundwater and Storm Drain Inspections (Annual)
- Handicapped Lift Inspections (6 months)
- Hazardous Materials Inspection by the Fire Department (Annual)
- Property Liability Safety Inspections (3 to 5 years)
- Playground Inspections (weekly, quarterly, and all new installations)
- Williams Act Inspections (Annual)

Periodic inspections are performed according to the following schedule:

- When we initially established the IIPP.
- When new substances, processes, procedures or equipment which present potential new hazards are introduced into the workplace.

- When new, previously unidentified hazards are recognized.
- When occupational injuries and illnesses occur.
- Whenever workplace conditions warrant an inspection.

Periodic inspections consist of identification and evaluation of workplace hazards utilizing applicable sections of the attached Site Inspection forms (available on intranet) or any other effective methods to identify and evaluate workplace hazards.

REPORTING PROCEDURES

For any occupational injury or illness which results in lost work time of at least a full day or shift beyond the date of occurrence, or which requires medical treatment beyond first aid, the employee must report the injury or illness to their supervisor. A Human Relations Analyst, will report the accident to the appropriate offices according to state and federal laws. For more information regarding injury and illness reporting, contact:

Milpitas Unified School District (408) 635-2600 ext.6070

WHERE TO SEEK MEDICAL ATTENTION

Employees may seek medical attention at the Districts specified clinic if they do not have a designated physician on file:

INJURY OR DEATH

The following action is required:

- The incident is reported to the supervisor
- CAL/OSHA must be notified immediately or within 8 hours by telephone. The local Cal/OSHA District Office telephone number is 1-510-794-2521. Serious injuries or fatalities must be report to the local Cal-OSHA area office.
- <http://www.dir.ca.gov/title8/342.html>
- Completion of “Employer’s Report of Occupational Injury or Illness” form 5020 within 24 hours

The supervisor shall conduct an initial investigation as soon as possible and distribute reports according to procedure.

LEGALLY REQUIRED REPORTS

A serious injury or illness is one that occurs in a place of employment or in connection with any employment which requires inpatient hospitalization for a period in excess of 24 hours, or in which an employee suffers a loss of any member of the body or suffers a serious degree of permanent disfigurement.

ACCIDENT/EXPOSURE INVESTIGATIONS

Procedures for investigating workplace accidents and hazardous substance exposures include:

Process and Action

- Visiting the accident scene as soon as possible.
- Interviewing injured workers and witnesses.
- Examining the workplace for factors associated with the accident/exposure.
- Determining the cause of the accident/exposure.
- Taking corrective action to prevent the accident/exposure from reoccurring.
- Recording findings and corrective actions taken.

Forms

- Use for Injury, Illness and Near Miss.
- Forms are posted from the Districts Main Office, Human Relations Dept.
- Completed forms are to be forwarded to sent to the Human Relations Dept.

HAZARD CORRECTION

The District uses a District wide Work Order System to address any necessary corrections stemming from near misses, observed unsafe work conditions or corrective action for accidents or injuries.

Unsafe or unhealthy work conditions shall be corrected in a timely manner based on the severity of the hazards. Hazards shall be corrected according to the following procedures:

- When observed or discovered, sites and individuals are required to report necessary hazard corrections through the District Work Order System. School Secretaries and District Office Administrative Assistants are key contacts for this system.
- Safety concerns, which require immediate attention, should be phoned into the Maintenance and Operations Department.
- The online Work Order System should be used for all other corrective actions which do not create an immediate danger.
- When an imminent hazard exists which cannot be immediately abated without endangering employee(s) and/or property, staff will remove all exposed workers from the area except those necessary to correct the existing condition. Workers necessary to correct the hazardous condition shall be provided with the necessary protection.
- All such actions taken and dates they are completed shall be documented.

Unsafe practices or procedures that are observed should be reported to immediate supervisors to be addressed by taking corrective action or providing necessary training.

TRAINING AND INSTRUCTION

All workers, including managers and supervisors, shall have training and instruction on general and job-specific safety and health practices as appropriate. Training and instruction shall be provided as follows:

- When the IIPP is first established.
- To all new workers, training to be appropriate as related to the job and observation during the probationary period.
- To all workers given new job assignments for which training has not previously been provided.
- Whenever new substances, processes, procedures and/or equipment are introduced to the workplace and represent a new hazard (job specific).
- Whenever the employer is made aware of a new or previously unrecognized hazard.
- To supervisors to familiarize them with the safety and health hazards to which workers under their immediate direction and control may be exposed.
- To all workers with respect to hazards specific to each employee's job assignment.

Workplace safety and health practices are based on our Hazard Assessment and documented in our list of training subjects.

Training and instruction will be provided in any format or media, which is readily understandable to all employees. Training formats and/or media may include but are not limited to:

- Seminars and Workshops
- Manuals
- Policies and procedures posted
- Booklets
- Video, film or other visual media
- Meetings
- Newsletters and inter-district memos

District management will ensure which all training and instruction provided under the Injury and Illness Program are documented. Employees attending or receiving training mandated by this program may be requested to sign an attendance sheet.

LIST OF TRAINING SUBJECTS

We train our workers about the following training subjects as appropriate:

- General Safe Work Practices
- Good housekeeping, fire prevention, safe practices for operating any construction equipment
- Safe procedures for cleaning, repairing, servicing and adjusting equipment and machinery
- Safe access to working areas
- Heat Stress
- Protection from falls
- Electrical hazards, including working around high voltage lines
- Proper use of powered tools
- Lock-out/Tag-out procedures
- Materials handling

- Chainsaw and other power tool operation
- Fall protection from elevated locations
- Use of elevated platforms, including condors and scissor lifts
- Driver safety
- Slips, falls and back injuries
- Ergonomic hazards, including proper lifting techniques and working on ladders or in a stooped posture for prolonged periods at one time
- Personal protective equipment
- Hazardous chemical exposures.
- Hazard communication.
- Physical hazards, such as heat/cold stress, noise.
- Bloodborne pathogens and other biological hazards.
- Emergency evacuation plan.
- Provisions for medical services and first aid including emergency procedures.
- Safety is Everyone's Business.
- COVID-19

SUBJECTS RECORDKEEPING

We are a local government entity and we are not required to keep written records of the steps taken to implement and maintain our IIPP.

Milpitas Unified School District Workplace Violence Prevention Program (WVPP)

WORKPLACE VIOLENCE IN CALIFORNIA

Our establishment's Workplace Violence Prevention Plan (WVPP) addresses the hazards known to be associated with the four types of workplace violence as defined by Labor Code (LC) section 6401.9.

Date of Last Review: May 31, 2024

Date of Last Revision(s): May 31, 2024

Board Approved: June 11, 2024

DEFINITIONS

Emergency - Unanticipated circumstances that can be life threatening or pose a risk of significant injuries to employees or other persons.

Engineering controls - An aspect of the built space or a device that removes a hazard from the workplace or creates a barrier between the employee and the hazard.

Log - The violent incident log required by LC section 6401.9.

Plan - The workplace violence prevention plan required by LC section 6401.9.

Serious injury or illness - Any injury or illness occurring in a place of employment or in connection with any employment that requires inpatient hospitalization for other than medical observation or diagnostic testing, or in which an employee suffers an amputation, the loss of an eye, or any serious degree of permanent disfigurement, but does not include any injury or illness or death caused by an accident on a public street or highway, unless the accident occurred in a construction zone.

Threat of violence - Any verbal or written statement, including, but not limited to, texts, electronic messages, social media messages, or other online posts, or any behavioral or physical conduct, that conveys an intent, or that is reasonably perceived to convey an intent, to cause physical harm or to place someone in fear of physical harm, and that serves no legitimate purpose.

Workplace violence - Any act of violence or threat of violence that occurs in a place of employment.

Workplace violence includes, but is not limited to, the following:

- The threat or use of physical force against an employee that results in, or has a high likelihood of resulting in, injury, psychological trauma, or stress, regardless of whether the employee sustains an injury.
- An incident involving a threat or use of a firearm or other dangerous weapon, including the use of common objects as weapons, regardless of whether the employee sustains an injury.
- The following are four types of workplace violence:

Type 1 violence - Workplace violence committed by a person who has no legitimate business at the worksite, and includes violent acts by anyone who enters the workplace or approaches employees with the intent to commit a crime.

Type 2 violence - Workplace violence directed at employees by customers, clients, patients, students, inmates, or visitors.

Type 3 violence - Workplace violence against an employee by a present or former employee, supervisor, or manager.

Type 4 violence - Workplace violence committed in the workplace by a person who does not work there, but has or is known to have had a personal relationship with an employee.

Workplace violence does not include lawful acts of self-defense or defense of others.

Work practice controls - Procedures and rules which are used to effectively reduce workplace violence hazards.

RESPONSIBILITY

The WVPP administrators, have the authority and responsibility for implementing the provisions of this plan for Milpitas Unified School District. If there are multiple persons responsible for the plan, their roles will be clearly described below.

Responsible Persons	Job Title/Position	WVPP Responsibility(ies)	Phone #	Email
Cheryl Jordan	Superintendent	Overall responsibility for the plan; approves the final plan and any major changes and submit it to the Board of Education.	408-635-2600 Ext. 6031	musd-supt@musd.org
Kristin Stonehouse	HR Director	Responsible for employee involvement and training; organizes safety meetings, updates training materials, and handles any reports of workplace violence.	408-635-2600 Ext. 6070	kstonehouse@musd.org
Van Nguyen	Director Maint, Operations, Transportation	Responsible for emergency response, hazard identification, and coordination with other employers; conducts safety inspections, coordinates emergency response procedures, and communicates with other employers about the plan.	408-635-2600 Ext. 6520	vanguyen@musd.org

All managers and supervisors are responsible for implementing and maintaining the WVPP in their work areas and for answering employee questions about the WVPP. A copy of this IIPP is available in the main office and is available on the Districts intranet.

All initial reports regarding a workplace violence concern will be reported immediately to the Director of MOT who will notify the Superintendent.

EMPLOYEE ACTIVE INVOLVEMENT

Milpitas Unified School District ensures the following policies and procedures to obtain the active involvement of employees and authorized employee representatives in developing and implementing the plan:

- Management will work with and allow employees and authorized employee representatives to participate in:
 - Identifying, evaluating, and determining corrective measures to prevent workplace violence.
 - Designing and implementing training
 - Reporting and investigating workplace violence incidents.

EMPLOYEE COMPLIANCE

Our system to ensure that employees comply with the rules and work practices that are designed to make the workplace more secure, and do not engage in threats or physical actions which create a security hazard for others in the workplace, include at a minimum:

- Training employees, supervisors, and managers in the provisions of Milpitas Unified School District Workplace Violence Prevention Plan (WVPP)
- Effective procedures to ensure that supervisory and nonsupervisory employees comply with the WVPP by incorporating the Keenan Workplace Violence training video part of the Mandated Advisories each year.
- Providing training and/or counseling to employees whose performance is deficient in complying with work practices designed to ensure workplace security.
- Discipline employees for violation of the WVPP existing discipline process in each of the Collective Bargaining Agreements.
- All employees will follow Board Policies BP 4157 and BP 4158
- Disciplining employees for failure to comply with workplace security practices.

COMMUNICATION WITH EMPLOYEES

At the Milpitas Unified School District, we recognize that open, two-way communication between our management team, staff, and other employers, about workplace violence issues is essential to a safe and productive workplace. The following communication system is designed to facilitate a continuous flow of workplace violence prevention information between management and staff in a form that is readily understandable by all employees, and consists of one or more of the following:

- New employee orientation includes workplace violence prevention policies and procedures.
- Workplace violence prevention training programs.

- Regularly scheduled meetings that address security issues and potential workplace violence hazards
- Effective communication between employees and supervisors about workplace violence prevention and violence concerns.
 - For example, ensure that supervisors and employees can communicate effectively and in the employees' first language.
- Posted or distributed workplace violence prevention information.
- How employees can report a violent incident, threat, or other workplace violence concern to employer or law enforcement without fear of reprisal or adverse action.
 - Employees can anonymously report a violent incident, threat, of other violence concerns.
 - Provide contact information for who to call for emergency response
 - See chart for specific staff number(s)
 - 911 can be accessed by any staff
- Employees will not be prevented from accessing their mobile or other communication devices to seek emergency assistance, assess the safety of a situation, or communicate with a person to verify their safety.
- Employees' concerns will be investigated in a timely manner and they will be informed of the results of the investigation and any corrective actions to be taken.
 - Updates on the status of investigations and corrective actions are provided to employees through email and at safety meetings. These updates could include information about the progress of investigations, the results of investigations, and any corrective actions taken.
 - Sharing training materials and incident reports with other employers to ensure a coordinated response to any incidents. This could involve sending copies of training materials and incident reports to other employers.

WORKPLACE VIOLENCE INCIDENT REPORTING PROCEDURE

The Milpitas Unified School District will implement the following effective procedures to ensure that:

All threats or acts of workplace violence are reported to an employee's supervisor or manager, who will inform the WVPP administrator. This can be accomplished by phone, email or in person. If that's not possible, employees will report incidents directly to the WVPP administrator, Kristin Stonehouse, HR Director.

- Employees can report incidents to their supervisor, HR and can be anonymous.
- Workplace Violence Reporting form: [W Violent-Incident-Report.docx](#)
- Any instances of retaliation will be dealt with swiftly and decisively in accordance with Board Policy 4119.21E and each of the respective Collective Bargaining Agreement which could include disciplinary action up to and including termination.

EMERGENCY RESPONSE PROCEDURES

The Milpitas Unified School District has in place the following specific measures to handle actual or potential workplace violence emergencies:

Effective means to alert employees of the presence, location, and nature of workplace violence emergencies by the following (but not limited to): Alarm systems, PA announcements, handheld 2-way radios and/or electronic devices.

The Milpitas Unified School District will have evacuation and/or sheltering plans. See SEMS (Standardized Emergency Management Systems) procedures which include plans, maps of evacuation routes, locations of emergency exit, and instructions for sheltering in place.

How to obtain help from staff, security personnel, or law enforcement per the approved MUSD Communication Protocol. This information includes who to contact, phone numbers, email addresses, and physical locations. If there is immediate danger, call for emergency assistance by dialing 9-1-1, and then follow the Communication Protocol procedures.

In the event of an emergency, including a Workplace Violence Emergency, contact one of the following:

Kristin Stonehouse
Director of Human Relations
408-635-2600 Ext. 6070
kstonehouse@musd.org

Van Nguyen
Director of Maint, Operations, Transportation
408-635-2600 Ext. 6520
vanguyen@musd.org

HAZARD ASSESSMENT

District personnel will be performing workplace hazard assessment for workplace security in the form of periodic inspections. Periodic inspections to identify and evaluate workplace security hazards and threats of workplace violence are performed by the Director of Maintenance, Operations and Transportation in the following areas of our workplace:

Periodic inspections are performed according to the following schedule:

- When the IIPP for Workplace Security was initiated.
- When new, previously unidentified security hazards are recognized.
- When occupational injuries or threats of injury occur.
- Whenever workplace security conditions warrant an inspection.
- Monitor inspection daily.

Periodic inspections for security hazards consist of identification and evaluation of workplace security hazards and changes in establishment perform inspections for each type of workplace violence by using the methods specified below to identify and evaluate workplace security hazards.

Inspections for Type I workplace security hazards include:

- Assessing the exterior and interior of the workplace for its attractiveness to robbers.
- Assessing the need for security surveillance measures, such as mirrors or cameras.
- Posting of signs notifying the public that limited cash is kept on the premises.
- Assessing procedures for worker response during a robbery or other criminal act.
- Assessing procedures for reporting suspicious persons or activities.
- Posting of emergency telephone numbers for law enforcement, fire and medical services where employees have access to a telephone with an outside line.

- Limiting the amount of cash on hand and using time access safes for large bills.

Inspections for Type II workplace security hazards include assessing:

- Access to, and freedom of movement within, the workplace.
- Adequacy of workplace security systems, such as door locks, security windows, security alarm system, physical barriers and restraint systems.
- Frequency and severity of threatening or hostile situations that may lead to violent acts by persons who are service recipients of our establishment.
- Employees' skill in safely handling threatening or hostile service recipients.
- Effectiveness of systems and procedures to warn others of a security danger or to summon assistance, e.g., alarms or panic buttons.
- The availability of worker escape routes.
- Inspections for Type III workplace security hazards include assessing.
- How well the School District's anti-violence policy has been communicated to employees, supervisors or managers.
- How well the School District's management and employees communicate with each other.
- Our employees, supervisors' and managers' knowledge of the warning signs of potential workplace violence.
- Access to, and freedom of movement within, the workplace by non-employees, including recently discharged employees or persons with whom one of our worker's is having a dispute.
- Frequency and severity of worker reports of threats of physical or verbal abuse by managers, supervisors or other employees.
- Any prior violent acts, threats of physical violence, verbal abuse, property damage or other signs of strain or pressure in the workplace.
- Worker disciplinary and discharge procedures.

HAZARD CORRECTION

Hazards, which threaten the security of employees, shall be corrected in a timely manner based on severity when they are first observed or discovered.

Corrective measures for Type I workplace security hazards include:

- Controlling access to the workplace and freedom of movement within it, consistent with business necessity (alarm systems, locked doors, storage units, etc).
- Ensuring the adequacy of workplace security systems, such as door locks, security windows, physical barriers and restraint systems.
- Providing worker training in recognizing and handling threatening or hostile situations, which may lead to violent acts by persons who are service recipients of our establishment.
- Ensuring adequate worker escape routes.

Corrective measures for Type II workplace security hazards include:

- Effectively communicating our District's anti-violence policy to all employees, supervisors or managers.
- Improving communication between our District's management and employees.

- Increasing employees', supervisors' and managers' awareness of the warning signs of potential workplace violence.
- Controlling access to, and freedom of movement within, the workplace by non-employees, including recently discharged employees or persons with whom one of our worker's is having a dispute.
- Ensure that all reports of violent acts, threats of physical violence, verbal abuse, property damage or other signs of strain or pressure in the workplace are handled effectively by management and that the person making the report is not subject to retaliation by the person making the threat.
- Ensure that worker disciplinary and discharge procedures address the potential for workplace violence.
- Ensure that worker's placed on administrative leave turn in their keys and other the School District property at time of action taken.
- Ensure that employees on extended leave turn in their keys and other the School District property at time of leave.

INCIDENT INVESTIGATIONS

The Milpitas Unified School District has established the following policy for investigating incidents of workplace violence. Our procedures for investigating incidents of workplace violence, which includes threats and physical injury are:

- Visit the scene of an incident as soon as safe and practicable.
- Interview involved parties, such as employees, witnesses, law enforcement, and/or security personnel.
- Review security footage of existing security cameras if applicable.
- Examen the workplace for security risk factors associated with the incident, including any previous reports of inappropriate behavior by the perpetrator.
- Determine the cause of the incident.
- Take corrective action to prevent similar incidents from occurring.
- Record the findings and ensuring corrective actions are taken.
- Obtain any reports completed by law enforcement.
- The violent incident log will be used for every workplace violence incident and will include information, such as: [Violent Incident Log](#)
 - The date, time, and location of the incident.
 - The workplace violence type or types involved in the incident.
 - A detailed description of the incident.
 - A classification of who committed the violence, including whether the perpetrator was a

client or customer, family or friend of a client or customer, stranger with criminal intent, coworker, supervisor or manager, partner or spouse, parent or relative, or other perpetrator.

- o A classification of circumstances at the time of the incident, including, but not limited to, whether the employee was completing usual job duties, working in poorly lit areas, rushed, working during a low staffing level, isolated or alone, unable to get help or assistance, working in a community setting, or working in an unfamiliar or new location.
- o A classification of where the incident occurred, such as in the workplace, parking lot or other area outside the workplace, or other area.
- o The type of incident, including, but not limited to, whether it involved any of the following:
 - Physical attack without a weapon, including, but not limited to, biting, choking, grabbing, hair pulling, kicking, punching, slapping, pushing, pulling, scratching, or spitting.
 - Attack with a weapon or object, including, but not limited to, a firearm, knife, or other object.
 - Threat of physical force or threat of the use of a weapon or other object.
 - Sexual assault or threat, including, but not limited to, rape, attempted rape, physical display, or unwanted verbal or physical sexual contact.
 - Animal attack.
- o Consequences of the incident, including, but not limited to:
 - Whether security or law enforcement was contacted and their response.
 - Actions taken to protect employees from a continuing threat or from any other hazards identified as a result of the incident.
 - Information about the person completing the log, including their name, job title, and the date completed.
- Reviewing all previous incidents.

Ensure that no personal identifying information is recorded or documented in the written investigation report. This includes information which would reveal identification of any person involved in a violent incident, such as the person's name, address, electronic mail address, telephone number, social security number, or other information that, alone or in combination with other publicly available information, reveals the person's identity.

TRAINING AND INSTRUCTION

The Milpitas Unified School District has established the following policy on training all employees with respect to workplace security.

All employees, including administrators and supervisors, shall have training and instruction on general and job-specific workplace security practices. Training and instruction shall be provided when:

- The IIPP for Workplace Security is first established and periodically thereafter.
- Training shall also be provided to all new employees and to other employees for whom training has not previously been provided and to all employees, supervisors and administrators given new job assignments for which specific workplace security training for that job assignment has not previously been provided.
- Additional training and instruction will be provided to all personnel whenever the employer is made aware of new or previously unrecognized security hazards.

The Milpitas Unified School District will provide its employees with training and instruction on the definitions found on page 13 of this plan and the requirements listed below:

- The employer's WVPP, how to obtain a copy of the employer's plan at no cost, and how to participate in development and implementation of the employer's plan.
- How to report workplace violence incidents or concerns to the employer or law enforcement without fear of reprisal.
- Workplace violence hazards specific to the employees' jobs, the corrective measures the Milpitas Unified School District has implemented, how to seek assistance to prevent or respond to violence, and strategies to avoid physical harm.
- The violent incident log and how to obtain copies of records pertaining to hazard identification, evaluation and correction, training records, and violent incident logs.
- Opportunities the Milpitas Unified School District has for interactive questions and answers with a person knowledgeable about the Milpitas Unified School District plan.
- Strategies to avoid/prevent workplace violence and physical harm, such as:
 - o How to recognize workplace violence hazards including the risk factors associated with the four types of workplace violence.
 - o Ways to defuse hostile or threatening situations.
- How to recognize alerts, alarms, or other warnings about emergency conditions and how to use identified escape routes or locations for sheltering.
- Employee routes of escape.
- Emergency medical care provided in the event of any violent act upon an employee
- Post-event trauma counseling for employees desiring such assistance.

Note: *Employers must use training material appropriate in content and vocabulary to the educational level, literacy, and language of employees.*

EMPLOYEE ACCESS TO THE WRITTEN WVPP

The Milpitas Unified School District ensures that the WVPP plan shall be in writing and shall be available and easily accessible to employees, authorized employee representatives, and representatives of Cal/OSHA at all times. This will be accomplished by:

- Whenever an employee or designated representative requests a copy of the written WVPP, we will provide the requester with a printed copy of the WVPP, unless the employee or designated representative agrees to receive an electronic copy.
- We will provide unobstructed access through a company server or website, which allows an employee to review, print, and email the current version of the written WVPP. Unobstructed access means that the employee, as part of their regular work duties, predictably and routinely uses the electronic means to communicate with management or co-employees.

RECORDKEEPING

The Milpitas Unified School District will:

- Create and maintain records of workplace violence hazard identification, evaluation, and correction, for a minimum of five (5) years.
- Create and maintain training records for a minimum of one (1) year and include the following:
 - Training dates.
 - Contents or a summary of the training sessions.
 - Names and qualifications of persons conducting the training.
 - Names and job titles of all persons attending the training sessions.
- Maintain violent incident logs for minimum of five (5) years.
- Maintain records of workplace violence incident investigations for a minimum of five (5) years.
 - The records shall not contain medical information per subdivision (j) of section 56.05 of the Civil Code.
- All records of workplace violence hazard identification, evaluation, and correction; training, incident logs and workplace violence incident investigations required by [LC section 6401.9\(f\)](#), shall be made available to Cal/OSHA upon request for examination and copying.

EMPLOYEE ACCESS TO RECORDS

The following records shall be made available to employees and their representatives, upon request and without cost, for examination and copying within **15 calendar days of a request**:

- Records of workplace violence hazard identification, evaluation, and correction
- Training records
- Violent incident logs

REVIEW AND REVISION OF THE WVPP

The Milpitas Unified School District WVPP will be reviewed for effectiveness:

- At least annually.
- When a deficiency is observed or becomes apparent.
- After a workplace violence incident.

- As needed.

Review and revision of the WVPP will include the procedures listed in the EMPLOYEE ACTIVE INVOLVEMENT section of this WVPP, as well as the following procedures to obtain the active involvement of employees and authorized employee representatives in reviewing the plan's effectiveness:

- Review of the Milpitas Unified School District's WVPP should include, but is not limited to:
 - o Review of incident investigations and the violent incident log.
 - o Assessment of the effectiveness of security systems, including alarms, emergency response, and security personnel availability (if applicable).
- Review that violence risks are being properly identified, evaluated, and corrected. Any necessary revisions are made promptly and communicated to all employees. [These revisions could involve changes to procedures, updates to contact information, and additions to training materials.]

EMPLOYER REPORTING RESPONSIBILITIES

As required by [California Code of Regulations \(CCR\), Title 8, Section 342\(a\). Reporting Work-Connected Fatalities and Serious Injuries](#), the Milpitas Unified School District will immediately report to Cal/OSHA any serious injury or illness (as defined by [CCR, Title 8, Section 330\(h\)](#)), or death (including any due to Workplace Violence) of an employee occurring in a place of employment or in connection with any employment.

Milpitas Unified School District

Bloodborne Pathogens

Exposure Control Plan

Policy Statement

It is the policy of the Milpitas Unified School District to eliminate or minimize occupational exposure to bloodborne pathogens in accordance with federal and state regulations. All human blood and other potentially infectious materials will be treated as if known to be infectious for human immunodeficiency virus (HIV), Hepatitis B virus (HBV), and other bloodborne pathogens.

Scope: The Exposure Control Plan (ECP) applies to all employees with actual or potential exposure to bloodborne pathogens at all sites.

Regulation: CCR-Title n8, Section 5193

Plan Administration

Table 1 provides the roles and contact information for the administration of the bloodborne pathogens program.

Table 1- Program Contact Information

Task	Name/Department	Phone
Plan Administrator		
Supplies (PPE, Cleaning, Materials, Other)		
Medical Recordkeeping		
Training		
Exposure Incident Contact		

The ECP administrator is responsible for implementation of the ECP, and will maintain, review, and update the ECP at least annually, and whenever necessary to include new or modified tasks and procedures and to reflect new or revised employee positions with occupational exposure.

Maintenance, Operations, and Transportation will provide and maintain all necessary PPE, engineering controls (e.g., sharps containers), and labels as required by the standard, and will ensure that adequate supplies of the aforementioned equipment are available in the appropriate sizes.

The Districts Human Relations Department, will be responsible for ensuring all medical actions required by the standard are performed and that appropriate employee health and OSHA records are maintained.

The Districts site administrators and program managers will be responsible for training as appropriate, documentation of training, and making the written ECP available to employees, the regulating authority, and representatives of the California Occupational Safety and Health Association (Cal-OSHA).

The Director of Maintenance, Operations and Transportation will act as the initial contact for reporting exposure incidents and ensure the appropriate response is carried out.

Those employees determined to have occupational exposure to blood or other potentially infectious materials (OPIM) must comply with the procedures and work practices outlined in this ECP.

Annual Plan Review and Update

This ECP will be reviewed and updated annually, and whenever new hazards are introduced in the workplace or conditions change that would result in a change in occupational exposure by employees.

ACCESS TO THE ECP

Employees covered by the bloodborne pathogens rules and policies will receive an explanation of this ECP during their initial training session. It will also be reviewed in their annual refresher training. All employees can review this plan at any time during their work shifts by contacting Human Relations. A copy of the ECP will be provided free of charge to any employee who requests it.

Definitions

Universal precaution- an approach to infection control whereas all human blood and certain human body fluids are treated as if known to be infectious for HIV, HBV, and other bloodborne pathogens.

Bloodborne pathogen- microorganisms that are present in human blood and can cause disease in humans. These pathogens include, but are not limited to, hepatitis B virus (HBV), hepatitis C virus (HCV), and human immunodeficiency virus (HIV) which causes acquired immune deficiency syndrome (AIDS).

Exposure incident- a specific eye, mouth, other mucous membrane, non-intact skin, or parenteral (i.e., needle stick) contact with blood or other potentially infectious materials that results from the performance of an employee's duties.

Occupational exposure- reasonably anticipated skin, eye, mucous membrane, or parenteral contact with blood or other potentially infectious materials that may result from the performance of an employee's duties. "Good Samaritan" acts such as assisting a co-worker with a nosebleed are not considered occupational exposure.

Other potentially infectious materials (OPIM)- body fluids visibly contaminated with blood, including saliva in dental procedures, semen, vaginal secretions, amniotic fluid, and other such material where it is difficult to differentiate between body fluids.

Percutaneous injury- exposure by injection or absorption through the unbroken skin.

Personal protective equipment (PPE)- protective covering for the head, eyes, hands, feet, and body, such as nitrile or other liquid-resistant gloves, a face mask, or an apron.

Sharps- any object contaminated with blood or OPIM that can penetrate the skin, including needles, scalpels, wood or metal splinters, broken glass, broken capillary tubes, and exposed ends of dental wires.

Employee Exposure Determination

Determinations for employee exposure are made for at risk job classifications where occupational exposure to blood or OPIM occurs, is likely to occur, or is possible to occur.

Table 2 contains a list of all job classifications in which employees are at high risk of or likely to have occupational exposure to bloodborne pathogens; training for these classifications is mandatory.

Table 2 Likely Occupational Exposure—Job Classifications

Job Classification	Department/Work Area	Exposure Task/Procedure
Custodian	M&O	Cleaning up after Students and assist in first aid
Health Clerk	Student Services	Administering First Aid
Nurse	Student Services	Administering First Aid and Injections
Pre-School Staff	Student Services	Student Contact, Toileting
Paraprofessional, Behavior Intervention Technician	Student Services	Student Contact, Toileting
Special Education Teacher	Student Services	Student Contact
School Secretaries	Site	Administering First Aid

Table 3 contains a list of job classifications in which employees may at some time have occupational exposure, including part-time, temporary, contract, or per diem employees. The list includes tasks and

procedures, or groups of closely related tasks and procedures, for which occupational exposure may occur for these individuals; training for these classifications is advisable but not mandatory.

Table 3 Possible Occupational Exposure—Job Classifications

Job Classification	Department/Work Ar	Exposure Task/Procedure
Bus Driver	Transportation	Student Contact
School Office Specialists and School Office Assistants	Site	Administering First Aide

If an employee believes he or she may be occupationally exposed to bloodborne pathogens and his or her job classification or tasks do not appear on the above lists, the employee should contact their immediate supervisor.

Implementation and Control Measures

UNIVERSAL PRECAUTIONS

All employees will use universal precautions in order to prevent contact with blood or OPIM. All blood and OPIM will be considered infectious regardless of the perceived status of the source.

Engineering Controls and Work Practices

Engineering controls and work practices will be implemented to prevent or minimize exposure to bloodborne pathogens. School Site administrators, and Maintenance Supervisor are responsible for ensuring that the engineering controls and work practices are implemented and updated as necessary.

The following engineering controls will or have been implemented:

- PPEs distributed.
- Annual review training.
- Update bloodborne Pathogen Exposure Control Plan annually.
- Periodic information articles published.
- Postings at all sites.

The following work practices will be followed:

- Wash hands immediately after contact with blood or OPIM.
- Exposed employees will wash their hands with running water and soap as soon as possible after using the antiseptic alternatives.
- When skin or mucous membranes are exposed to blood or OPIM, those areas of the body will be washed or flushed with running water as soon as possible after contact.

- After removal of PPE (e.g., gloves, face mask) used during exposure to blood or OPIM, the employee(s) will wash hands or other exposed skin areas with running water and soap as soon as possible.

The Director of Maintenance, Operations and Transportation evaluates new exposure control procedures and new products regularly by reviewing the Safety Data Sheets (SDS) and consulting with Student Services and Human Relations.

Housekeeping—Cleaning and Decontamination

All equipment, work areas, and working surfaces will be cleaned and decontaminated immediately or as soon as possible after any spill of blood or OPIM materials, after completion of procedures, and at the end of the work shift if the surface may have become contaminated since the last cleaning.

Decontamination of surfaces, equipment, and work areas will be accomplished by using one of the recommended EPA registered decontamination products as listed on their website. For example:

- Envirox Concentrate 118.

Blood- or OPIM-contaminated waste will be placed in containers which are closable, constructed to contain all contents and prevent leakage, appropriately labeled or color-coded, and closed prior to removal to prevent spillage or protrusion of contents during handling.

The procedure for handling sharps disposal containers is:

1. Notify the Maintenance, Operations and Transportation for pick up.
2. Maintenance, Operations and Transportation disposes in the hazardous waste container by Health Services.
3. Maintenance, Operations and Transportation disposes sharps according the direction from the County Public Health. Drop off requires a signature from the receiving person and department at the chosen location noted above.

The procedure for handling blood- or OPIM-contaminated waste is:

1. Dispose of hazardous waste in a designated bag.
2. Notify Maintenance, Operations and Transportation for pick up.
3. Maintenance, Operations and Transportation disposes in the hazardous waste container.
4. Maintenance, Operations and Transportation calls for hazardous waste pick up from a designated company.

Contaminated sharps will be discarded immediately or as soon as possible in containers that are closeable, puncture-resistant, leak proof on sides and bottoms, and appropriately labeled or color-coded. Clean sharps disposal containers are available at site health office.

Bins, pails (e.g., wash or emesis basins), cans, and similar receptacles will be inspected and decontaminated on a regularly scheduled basis, and cleaned and decontaminated as soon as possible after visible contamination.

Broken glassware that may be contaminated will only be picked up using mechanical means, such as a brush and dustpan.

Sharps Injury Prevention

The following sharps safer devices and engineering controls will be implemented:

- Needleless IV system.
- Self-sheathing.

All employees will comply with the following work practice controls to reduce exposure to sharps:

- Contaminated needles and other contaminated sharps will not be bent, recapped, or removed.
- Shearing or breaking contaminated needles is prohibited.
- Contaminated reusable sharps must be placed in designated reusable sharps containers.
- Any bending, recapping, or needle removal must be accomplished by the school nurse.

Sharps disposal

Sharps disposal containers are inspected and maintained or replaced by the school nurse whenever necessary to prevent overfilling.

Review and update procedures. This facility identifies the need for changes in engineering controls and work practices for the management of sharps through:

- Review of OSHA records.
- Interviews with employees responsible for direct patient care.

Human Relations will evaluate new procedures and new products regularly by reviewing new state and federal requirements and student needs.

Both front-line workers and management officials are involved in the process for evaluating new procedures and products in the following manner:

- Employee input
- State and Federal guidelines
- District needs

Maintenance, Operations and Transportation is responsible for ensuring that approved recommendations from the evaluations are implemented.

PPE

PPE is provided to our employees at no cost to them. PPE will be chosen based on the anticipated exposure to blood or OPIM. The PPE will be considered appropriate only if it does not permit blood or OPIM to pass through or reach the employee's clothing, skin, eyes, mouth, or other mucous membranes under normal conditions of use and for the duration of time which it will be used.

Table 4 describes in detail how PPE will be provided and the types of PPE that will be given to employees.

Table 4 Provision of PPE to Employees

How Provided	PPE Distributor	Procedures Requiring PPE	Type of PPE Required
M&O Department	Site Administrator	Cleaning	Gloves, Glasses, Clothing
Yard Duty	Site Administrators Program Managers	First Aide	Gloves
Health Services	Site Administrators Program Managers	Cleaning and First Aide	Gloves
Training	Site Administrators Program Managers	Cleaning and First Aide	Gloves
Site Staff	Site Administrators	Cleaning and First Aide	Gloves

All PPE will be cleaned, laundered, and disposed of by the employer. All repairs and replacements will be made by the employer.

All PPE will be removed prior to leaving the work area. If visibly contaminated, PPE will be placed in an appropriately designated area or container for storage, washing, decontamination, or disposal. The designated areas are:

- Custodial Closet.

Precautions when using PPE: All employees using PPE must observe the following precautions

- Wash hands immediately or as soon as possible after removal of gloves or other PPE.
- Remove PPE after it becomes contaminated, and before leaving the work area.
- Used PPE may be disposed of in the hazardous waste container.
- Wear appropriate gloves when it can be reasonably anticipated that there may be hand contact with blood or OPIM, and when handling or touching contaminated items or surfaces; replace gloves if torn, punctured, contaminated, or if their ability to function as a barrier is compromised.
- Utility gloves may be decontaminated for reuse if their integrity is not compromised; discard utility gloves if they show signs of cracking, peeling, tearing, puncturing, or deterioration.
- Never wash or decontaminate disposable gloves for reuse.
- Wear appropriate face and eye protection when splashes, sprays, spatters, or droplets of blood or OPIM pose a hazard to the eye, nose, or mouth.
- Remove immediately or as soon as feasible any garment contaminated by blood or OPIM, in such a way as to avoid contact with the outer surface.

Blood-contaminated PPE

If PPE or personal clothing is splashed or soaked with blood or OPIM, the person wearing the PPE or clothing will remove the contaminated clothing as soon as possible. This clothing will be laundered at

the employer's expense. Such clothing will be identified as contaminated and any employee exposed to it will be notified and protected from exposure.

Gloves

Gloves will be worn where it is reasonably anticipated that employees will have hand contact with blood, OPIM, non-intact skin, and mucous membranes. Gloves will be available from the Maintenance Supervisor, health assistants, and site administrators.

Disposable gloves will not be washed or decontaminated for reuse and will be replaced when they are torn, punctured, or when their ability to function as a barrier is compromised. Utility gloves may be decontaminated for reuse provided that the integrity of the glove is not compromised. Utility gloves will be discarded if they are cracked, peeling, torn, punctured, or exhibit other signs of deterioration or when their ability to function as a barrier is compromised.

PPE Training

All employees covered under the requirements of this plan will be trained to properly use, put on, take off, decontaminate, maintain, and store PPE. Training in the use of the appropriate PPE is provided by Human Relations, Student Services and site administrators.

Disposable PPE

Disposable gloves and paper face masks must not be used again once they are removed. Never wash or decontaminate disposable gloves for reuse. Replace them as soon as possible after they become contaminated or if they are torn, punctured, or their ability to function as a barrier is compromised.

Disposable PPE may be discarded in the regular trash if it has no visible contamination with blood or OPIM. Place PPE with visible contamination with blood or OPIM in a sharps or biohazard container.

HEPATITIS B VACCINATION

Human Relations and site administrators will provide training to employees on hepatitis B vaccinations, addressing safety, benefits, efficacy, methods of administration, and availability.

The hepatitis B vaccination series is available at no cost after initial employee training.

When an employee elects to be vaccinated, a licensed health care professional will conduct a medical evaluation.

Vaccination is encouraged unless:

- Documentation exists that the employee has previously received the series;
- Antibody testing reveals that the employee is immune; or
- Medical evaluation shows that vaccination is contraindicated.

Following the medical evaluation, a copy of the health care professional's written opinion will be obtained and provided to the employee within 15 days of the completion of the evaluation. The evaluation will be limited to whether the employee requires the hepatitis vaccine and whether the vaccine was administered.

Declination of the vaccine. If an employee declines the vaccination, the employee must sign a declination form (attached to this ECP). Employees who decline may request and obtain the vaccination at a later date at no cost. Signed declination forms are kept in Human Relations.

Exposure Incident Management

EXPOSURE INCIDENT REPORT

Any incident that results in occupational exposure to blood or OPIM will be reported immediately to Keenan and Associates and the SCCSIG. A separate report must be completed by each person exposed to blood or OPIM. The report will include the name of the person exposed, the time and date of the incident, and a determination of whether an exposure has occurred. If exposure has occurred, a post-exposure evaluation will be performed.

POST-EXPOSURE EVALUATION AND FOLLOW-UP

A confidential medical evaluation and follow-up will be conducted by Keenan and Associates. After initial first aid or medical attention, the following activities will be performed by:

- Document the routes of exposure and how the exposure occurred.
- Identify and document the source individual (unless the employer can establish that identification is infeasible or prohibited by state or local law).
- Obtain consent and make arrangements to have the source individual tested as soon as possible to determine HIV, HCV, and HBV infectivity; document that the source individual's test results were conveyed to the employee's healthcare provider.
- If the source individual is already known to be HIV, HCV and/or HBV positive, new testing need not be performed.
- Assure that the exposed employee is provided with the source individual's test results and with information about applicable disclosure laws and regulations concerning the identity and infectious status of the source individual (e.g., laws protecting confidentiality).
- After obtaining consent, collect exposed employee's blood as soon as feasible after exposure incident, and test blood for HBV and HIV serological status.

If the employee does not give consent for HIV serological testing during collection of blood for baseline testing, preserve the baseline blood sample for at least 90 days. If the exposed employee elects to have the baseline sample tested during this waiting period, perform testing as soon as feasible.

ADMINISTRATION OF POST-EXPOSURE EVALUATION AND FOLLOW-UP

The School District ensures that the healthcare professional(s) responsible for employee's hepatitis B vaccination and post-exposure evaluation and follow-up are given a copy of the bloodborne pathogens regulation. The School District will ensure that the healthcare professional evaluating an employee after an exposure incident receives:

- A description of the employee's job duties relevant to the exposure incident.

- A description of route(s) of exposure.
- Circumstances of exposure.
- If possible, results of the source individual's blood test.
- Relevant employee medical records, including vaccination status.

The District's appointed clinic will provide the employee with a copy of the evaluating healthcare professional's written opinion within 15 days after completion of the evaluation.

PROCEDURES FOR EVALUATING THE CIRCUMSTANCES SURROUNDING AN EXPOSURE INCIDENT

Human Relations will review the circumstances of all exposure incidents to determine the:

- Engineering controls in use at the time.
- Work practices followed.
- Description of the device being used (including type and brand).
- Protective equipment or clothing that was used at the time of the exposure incident (gloves, eye shields, etc.).
- Location of the incident.
- Procedure or task being performed when the incident occurred.
- Employee's training.

The Human Relations Department will record all percutaneous injuries from contaminated sharps in a Sharps Injury Log.

Employee Training

All employees who have occupational exposure to bloodborne pathogens will receive initial and annual training conducted by Human Relations and/or site administrator/Program Manager.

All employees who have occupational exposure to bloodborne pathogens will receive training on the epidemiology, symptoms, and transmission of bloodborne pathogen diseases. In addition, the training program covers, at a minimum, the following elements:

- A copy and explanation of the OSHA bloodborne pathogen standard.
- An explanation of our ECP and how to obtain a copy.
- An explanation of methods to recognize tasks and other activities that may involve exposure to blood and OPIM, including what constitutes an exposure incident.
- An explanation of the use and limitations of engineering controls, work practices, and PPE.
- An explanation of the types, uses, location, removal, handling, decontamination, and disposal of PPE.
- An explanation of the basis for PPE selection.
- Information on the hepatitis B vaccine, including information on its efficacy, safety, method of administration, the benefits of being vaccinated, and that the vaccine will be offered free of charge
- Information on the appropriate actions to take and persons to contact in an emergency involving blood or OPIM
- An explanation of the procedure to follow if an exposure incident occurs, including the method of reporting the incident and the medical follow-up that will be made available
- Information on the post-exposure evaluation and follow-up that the employer is required to provide for the employee following an exposure incident

- An explanation of the signs and labels and/or color coding required by the standard and used at this facility
- An opportunity for interactive questions and answers with the person conducting the training session

Recordkeeping

TRAINING RECORDS

Training records are completed for each employee upon completion of training. These documents will be kept for at least 3 years in Human Relations.

The training records will include the:

- Dates of the training sessions.
- Contents or a summary of the training sessions.
- Names and persons conducting the training.
- Names and job titles of all persons attending the training sessions.

Employee training records are provided upon request to the employee or the employee's authorized representative within 15 working days. Such requests should be addressed to the Human Relations Department.

Medical Records

Medical records are maintained for each employee with occupational exposure in accordance with the employee exposure and medical records regulation. Human Relations is responsible for maintenance of the required medical records. These confidential records are kept in Human Relations for at least the duration of employment plus 30 years.

OSHA RECORDKEEPING

An exposure incident is evaluated to determine if the case meets OSHA's Record-Keeping Requirements (29 CFR 1904).

Injury Log

In addition to the OSHA recordkeeping requirements, all percutaneous injuries from contaminated sharps are also recorded in a Sharps Injury Log. All incidents will include at least:

- The date of the injury.
- The type and brand of the device involved (syringe, suture needle).
- The department or work area where the incident occurred.
- An explanation of how the incident occurred.

The Sharps Injury Log is reviewed as part of the annual program evaluation and maintained for at least 5 years following the end of the calendar year covered. If a copy is requested by anyone, it will have any personal identifiers removed from the report.

1331 E. Calaveras Blvd. | Milpitas, CA 95035 | 408-635-2600 | www.musd.org

Milpitas Unified School District Ergonomics Injury and Illness Prevention Plan

Introduction

The School District has written and developed this program to comply with the provisions of Section 5110 of Title Eight of the California Code of Regulations and to address the problem of repetitive motion injuries that result from work-related activity.

The “Ergonomics Injury & Illness Prevention Program” outlines the policies and procedures that are both necessary and required to control RMI’s and comply with the various provisions of the ergonomics safety regulations. Although a copy of the current California standard is contained in this manual, significant changes should be anticipated over the coming months and possibly years. The Federal OSHA has issued a proposed ergonomics standard that could impact California in the near future.

The School District will continue to stay informed of the changes in ergonomic rules and regulations, and we will make changes to our program as regulations evolve. In the meantime, the following procedures will define our approach to workplace ergonomics until those changes are approved and adopted.

Program Scope & Administration

STANDARD

Under certain specific circumstances, employers are required to develop a four-step prevention program to cope with repetitive motion injuries in the workplace.

SPECIFIC CRITERIA

1. This section (5110) applies to a job, process, operation, or other group work classification where a repetitive motion injury (RMI) has occurred to two or more employees.
2. The two RMI’s must have occurred within a single process, operation, or other similar work group classification to activate the requirements of this safety regulation.
3. The RMI must have been predominately caused by a work-related repetitive job activity. Predominately means over 50% caused by work activity.
4. The two or more employees incurring the RMI’s must have been performing the same job processor operation of identical work activity.
5. The RMI’s must have been musculoskeletal injuries that have been objectively identified and diagnosed by a licensed physician.
6. The RMI’s must have been reported to the employer by the involved employees within the last twelve months, but not prior to July 3, 1997.
7. Employers with nine or fewer employees are NO LONGER exempted from this regulation as of a California Court of Appeals decision in January 2000.

Work Site Evaluation & Hazard Assessment

STANDARD

All job classifications and/or categories that are covered by this section or safety standard must be evaluated and examined for exposure and hazards that may cause RMI’s.

SPECIFIC CRITERIA

1. As with other portions of this standard, the exposure evaluation is required after two or more RMI's occur to two or more employees.
2. The exposure factors that need to be identified within each separate job category involve repetition and force. High repetition with strong forces has the most serious exposure to RMI's.
3. Repetition refers to the number times an identical activity is repeated during a specific time period. A few repetitions per hour does not constitute a highly repetitive activity.
4. Force refers to the amount of energy or strength needed to perform an activity. The more force that is needed, the less the repetitions needed to potentially cause an RMI.

Control of Work-Related RMI Exposures

STANDARD

When a specific work group or category has demonstrated the potential for RMI's, an effort shall be made to control and/or mitigate the work exposures. The RMI exposures shall be addressed in a timely manner and to the extent feasible.

SPECIFIC CRITERIA

1. One method for mitigating exposures is the redesign of a job. Redesign means changing the way the job is performed so repetition and force exposures are reduced. In some cases redesign may involve transferring duties to other less stressful job categories.
2. Another method involves reducing force and repetition stress through teamwork. An example of basic teamwork includes requiring two people to lift a heavy object. Other ideas can be identified during the job evaluation phase.
3. Another technique involves the use of rest breaks and work pacing. Short, frequent breaks are usually preferable to longer less frequent breaks.
4. Job rotation is another concept that has a practical application in some work situations. Worker skill and aptitude are required for this concept to be practical and effective.
5. Engineering controls are another exposure reduction concept and involve reducing the size of containers, installing handles or grips for lifting or pushing, increasing the size of wheels to improve rolling, and other ideas identified during the exposure evaluation process.
6. Modifications to clerical or computer workstations or adjustable furniture, such as stools or chairs should be considered as remedies to RMI exposures.
7. Cost and practicality are concepts that must be applied to the phrase "to the extent feasible." Reducing RMI exposures should not put a business at financial risk or prohibit the actual performance of the job. Conversely, ideas known to the employer but not taken which may reduce RMI exposure to a greater extent without imposing significantly increased cost must be considered.

Employee Training

STANDARD

When this section is activated by the existence of two or more RMI's with a specific job classification, certain specific training requirements are activated.

SPECIFIC CRITERIA

1. Employees within one or more of the job categories covered by the standard should be made aware of the employer's ergonomics prevention program and its specific provisions.
2. Employees should be made aware of the various work injury exposures discovered during the RMI injury exposure evaluation process.
3. The various symptoms and the long-term consequences of the injuries caused by RMI's shall be communicated to employees within the affected work groups.
4. Employees within affected job groups must be made aware of the importance of reporting of symptoms so interventions can be more effective.
5. Training shall include an understanding of all exposure control methods, such as job redesign, workstation modification, exercise techniques, and other ideas discussed in the section on exposure control and reduction.

Workstation Evaluation

The proper setup of the workstation is the key to office ergonomics. An improper office arrangement will promote poor posture, increased physical stress, and can cause increased fatigue and may lead to symptoms of repetitive motion injuries (RSI's). All Ergonomic evaluations are requested through the employees supervisor.

The evaluation must involve a comprehensive review of all factors, however, the chair is the place to start. The seat height should be adjustable so the legs of the employee can be properly positioned so the thighs are parallel with floor and the feet are firmly resting on the floor. The legs should not hang nor should they be bent at the ankles so the employee's toes can touch the floor. These conditions will lead to muscle tightening, tension, and fatigue.

The back of the chair should have a good lumbar pad, which gives solid support to the small curve of the lower back. The back pad should be adjustable so the lower portion rides in the small of the back where support is needed. If the pad is too low it will not provide the needed support and the seat pad will tend to push the user toward the edge of the chair. Back pad tilt is a valuable option, but not as necessary as the height adjustments. Back pad tilt allows the user to bring the lumbar pad forward or back as needed.

Armrests are one of those accessories, which can be described as a personal option. Some people like them and some don't. The important thing is to be sure the height of the armrest is low enough to allow the arms to hang in a natural position so the shoulders are not compressed up toward the neck. This condition will also lead to muscle fatigue in the shoulder and neck area. Arms rests are usually removable and some have an adjustable height.

The proper size of the seat pad will vary with the size of the user. The back of the legs should clear the front of the seat pad by 2 to 4 inches. If the clearance is much larger, the seat is probably too small and the user may feel like they are not being adequately supported. This will promote muscle tightening and will probably lead to aching muscles and leg fatigue.

Other chair features include seat pad tilt, adjustable lumbar supports, and a rotational adjustment to the armrest. All of these features add cost and comfort, however, they are not as important as the

other features. Once the proper chair has been selected we can move the employee into the work area to check other factors. The keyboard and mouse set-up are the next targets for review. The arms should be positioned similarly to the legs. They should be parallel with the floor and the wrist should be in the neutral (straight) position. If this is on the desktop, it may be too high. If an adjustable tray is being used, it may be positioned improperly. The adjustable keyboard tray with mouse support is probably the most desirable setup for most situations. The adjustment allows the user to position the keyboard and mouse at the proper level and proper angle without changing the position of the legs and feet.

The monitor should be placed directly in front of the worker, and it should be low enough that the top of the screen is about 5 degrees below eye level when looking straight out. The distance is recommended between 16 to 22 inches allowing the head to rest comfortably over the shoulders. Glasses, personal choice and the need for desk surface could affect the distance. The distance is a concern, but it is not as critical as the height and the location. Working with head tilted back and/or twisted to the side will lead to neck cramps and fatigue. Bifocals are discouraged because of the required head tilt. A single prescription lens is recommended for the computer user.

Other accessories include the work holder. The holders that mount on the top of the monitor with Velcro are effective because they leave the desk surface clear and they keep the work close to the screen. An office products catalog contains a variety of different designs and locating the proper type should be no problem. It is important to avoid twisting the neck to look at copy work, which is positioned on a return or table off to the side. Keep the copy work in front of the user and at the same distance as the screen.

The diagram in the next section displays the various factors discussed above. Review the drawing and review the information included. By using the diagram, the above information, and the checklist, which follows; you should be able to complete an effective workstation review.

In general, move the frequently used objects into a primary space that is closest to you. Be careful to take into consideration your left/right preferences to reduce reaching and stretching. Move freely and work healthy.

ERGONOMIC EXERCISES

RELEASING HAND, WRIST & SHOULDER TENSION

- **STRETCHING**
 - Place your hands out in front of you. Then spread your fingers as far apart as possible. Hold for five seconds and then relax. Repeat this process five times.
- **ROTATIONS**
 - Rotate your wrists, keeping your fingers relaxed and your elbows still. With your hands extended, first turn your palms up and then rotate your palms down. Repeat the exercise five times.
- **HANDSHAKING**
 - With your hands extended, relax your muscles and let your hands dangle at the wrists. Then shake your hands. First, shake them up and down and then shake them from side to side. Repeat the exercise until the tension is gone.
- **REACHING**
 - Place your arms over your head. With your fingers stretched, reach toward the ceiling. Hold the stretch for five seconds and then relax. Repeat five times.
- **ROLLING**
 - Using a wide circular motion, roll your shoulders backward. Repeat the exercise five times.
- **SHIFTING**
 - While sitting in your chair, move around to loosen up. Slouch, slump, look away from the screen, and dangle your arms. Repeat as often as necessary.
- **NECK GLIDES**
 - While seated, glide your neck forward and hold. Then glide the neck to the rear and hold. Keep the chin level. Repeat the exercise five times.
- **DEEP BREATHING**
 - Close your eyes, inhale and hold your breath while tightening your entire body. Slowly exhale and relax. Repeat five times.
- **EYE RELAXATION**
 - Using the index and middle finger gently massage the eye area just above and below the brow - first in a clockwise direction and then a counter- clockwise direction.
- **FINGER STRETCHES**
 - With hands at your sides and keeping the wrist straight, curl the fingers to the base of the fingers bending only the joints. Straighten the hands and relax. Repeat five times.

Exercises and Relaxation Techniques

Repetition and force are important factors in the study of ergonomics and in determining the cause of RSI's. Repetition and force coupled with an improper workstation setup can in some cases lead to discomfort, fatigue, and the symptoms of RSI's over a longer period of time.

Repetition refers to the number of times a worker has to complete hand, arm, and finger manipulations. Force refers to the amount of effort or strain that must be exerted with each repetition. A high number of repetitions with heavy force are the most undesirable situation. There are a number of ways the effects of force and repetition can be mitigated.

Exercises are an excellent way to relieve some of the stress and tightness in the neck, fingers, hands, and shoulders. There are several different exercises included in this section that can be performed at the desk. Additionally, there are software programs available that remind the workers when to take breaks and show them how to exercise properly.

Taking rest breaks from the keyboard to do copying, filing, and other tasks is another way to reduce the build-up of tension and fatigue. Even short breaks are beneficial because they allow for some recovery in the muscles and tendons. And in addition, short breaks allow for a mental rest, which can have a major effect on reducing stress build up.

Scheduling is another method, which can be used to avoid prolonged periods at the keyboard. By breaking up a variety of duties such as filing, copying, keying, and other tasks, the employee can limit keying to four one-hour periods rather than one prolonged four-hour period. The short segments allow for recovery between segments.

Taking breaks, organizing the work so a variety of tasks can be mixed over a period of a few hours is preferred rather than spending prolonged periods at one repetitive motion task.

OFFICE ERGONOMICS
General

Location:		Date:	
Jobs:		Used For:	
Main Topic	Yes	No	Comments
WORKER POSITIONING			
1. Are the worker's forearms and wrists parallel to the floor and the upper arms resting at his/her sides when positioned at the keyboard or the work surface?			
2. Are the worker's thighs parallel to the floor?			
3. Are the worker's feet flat on the floor or a footrest?			
4. Is there at least 2 inches of clearance between the worker's thighs and the working surface?			
5. Is there space between the edge of the seat pan and the back of the worker's knees?			
6. Are the worker's palms and wrists free from touching the keyboard or desk edge?			
7. Is the top of the viewing screen at eye level?			
8. Does the chair backrest support the curve of the worker's lower back?			
WORKSTATION SETUP			
9. Does the worker refer primarily to items placed in front of him/her?			

10. Is the VDT monitor positioned perpendicular to window light?			
11. Is there glare from overhead light?			
12. Is the screen between 18-24 inches from the worker's eyes?			
13. Can the workspace be adapted for either right or left-hand use?			
14. Are all frequently used items within a 6- to 14- inch reach of the worker?			
15. Are frequent reaches below shoulder height and/or above knee height?			
16. Does the arrangement of the work area allow access to all equipment and job aids without twisting?			

OFFICE ERGONOMICS
General

Location:		Date:	
Jobs:		Used For:	
Main Topic	Yes	No	Comments
17. Are all cables routed out of the worker's way?			
WORK SPACE			
18. Is there space to perform all tasks at the workstation (at least 24" deep and 24")?			
19. Are work surfaces and/or equipment corners or edges rounded and smooth?			
KEYBOARD			
20. Is the keyboard detachable from the monitor?			
21. Can the keyboard adjust in angle? (ANSI recommends adjustability between 0-25 degrees.)			
22. Does the keyboard have a matte finish?			
23. Is the keyboard positioned on a user adjustable height/tilt support?			
MONITOR			
24. Can the monitor height be adjusted by the user?			
25. Does the monitor tilt? Swivel?			

26. Are images on the screen clear/sharp and easy to read?			
27. Is the screen anti-glare?			
28. If there is glare, is there an anti-glare filter or a VDT hood?			
29. Are there adjustable brightness and contrast controls?			
DOCUMENT HOLDER			
30. Is the document holder positioned at a similar distance from the workers' eyes to the monitor?			
31. Is the document holder positioned to allow neutral head positioning?			
CHAIR			

OFFICE ERGONOMICS
General

Location:		Date:	
Jobs:		Used For:	
Main Topic	Yes	No	Comments
32. Can the worker, when seated, easily adjust the chair?			
33. Is the lumbar support adjustable in height and angle? Does it lock?			
34. Is the lumbar support at least 12 inches wide and 6-9 inches high (ANSI)?			
35. Is the tension on the backrest support adjustable?			
36. Is the center of the lumbar support between 6- 10 inches above the seat pan (ANSI)?			
37. If chair has armrests, are they adjustable in height?			
38. If chair has armrests, do they allow worker to get close to the work surface?			
39. If chair has armrests, are they at least 18.2 inches apart from each other (ANSI)?			
40. If chair has armrests, are they at least 2 inches wide?			
41. If chair has armrests, are the edges contoured and padded?			
42. Is the front seat pan edge rounded?			

43. Does the seat pan tilt? Lock?			
44. Is the seat pan at least 18 inches wide (ANSI)?			
45. Is the seat pan depth between 15-17 inches (ANSI)?			
46. Does the seat pan adjust in height between 16 to 20-½ inches (ANSI) (excludes drafting chairs)?			
47. Does the chair have a 5-legged swivel base?			
48. Does the chair have wheels or casters that allow mobility on carpeted floors?			
49. Is the chair padded?			

OFFICE ERGONOMICS

Milpitas Unified School District Heat Stress and Prevention Plan

Heat Illness Prevention

Scope: This Plan covers employees who are exposed to heat or hot conditions at or above the threshold levels for work areas and activities identified in the heat stress hazard assessment.

Policy: This organization is committed to protecting employees from the hazards of hot conditions and to preventing heat-related illnesses at the workplace. We will identify, evaluate, and control potential exposure of our employees to extreme temperature, humidity, and other heat-related factors.

Plan Administrator: The Plan Administrators, Director of MOT, Maintenance Supervisor, and Project Coordinator are responsible for implementing the Heat Stress Prevention Program, monitoring work area heat conditions and for ensuring that employees are trained to recognize the signs and symptoms of heat stress illnesses or injury and what to do if these occur.

Contact information:

Director of MOT	Van Nguyen	vanguyen@musd.org
District Safety Officer	Anthony Valdez	avaldez@musd.org

The Administrator may designate and authorize other personnel to implement specific components of the Plan.

Supervisors: Supervisors are responsible for encouraging employees to frequently consume water or other acceptable beverages to ensure hydration.

Prior to each workday, the forecasted temperature and humidity for the worksite will be reviewed and will be compared against the National Weather Service Heat Index to evaluate the risk level for heat illness.

Determination will be made of whether or not workers will be exposed at a temperature and humidity characterized as either “extreme caution” or “extreme danger” for heat illnesses. It is important to note that the temperature at which these warnings occur must be lowered as much as 15 degrees if the workers under consideration are in direct sunlight.

The temperature will be taken into consideration to determine when it will be necessary to make modifications to the work schedule (such as stopping work early, rescheduling the job, working at night or during the cooler hours of the day, increasing the number of water and rest breaks.

Employees: Employees are responsible for monitoring their own personal factors for heat-related illness including consumption of water or other acceptable beverages to ensure hydration and taking cool-down breaks in the shade.

Plan Review and Update

This Plan will be periodically reviewed and updated when:

- New activities or equipment that creates heat stress are introduced into the workplace.
- Evaluations of heat stress hazards, injuries, and illnesses demonstrate that the current Plan is outdated or not effective.
- Regulatory or applicable national consensus standards change that require this Plan to be updated.

DEFINITIONS

Acclimatization or acclimate is the physiological (i.e., physical, mechanical, and biochemical) change that allows the human body to adapt or get used to the effects of a new physical environment or climate. After a period of acclimatization, the same physical activity will produce fewer cardiovascular demands. The worker will sweat more efficiently, causing better evaporative cooling, and thus will more easily be able to maintain normal body temperatures.

Calorie is the amount of heat required to raise 1 gram of water 1° Celcius (C) (based on a standard temperature of 16.5 to 17.5°C).

Conduction is the transfer of heat between materials that contact each other. Heat passes from the warmer material to the cooler material. For example, a worker's skin can transfer heat to a contacting surface if that surface is cooler, and vice versa.

Convection is the transfer of heat in a moving fluid. Air flowing past the body can cool the body if the air temperature is cool. On the other hand, air that exceeds 85° Fahrenheit (F) can increase the heat load on the body.

Dry bulb (DB) temperature is the measurement of the heat content of freely exposed air measured by a thermal sensor that is shielded from direct radiant energy sources.

Evaporative cooling takes place when sweat evaporates from the skin. High humidity reduces the rate of evaporation and thus reduces the effectiveness of the body's primary cooling mechanism.

Globe temperature is the temperature inside a blackened, hollow, thin copper globe.

Heat is a measure of energy that is transferred by a difference in temperature.

Metabolic heat is a by-product of the body's activity.

Natural wet bulb (NWB) temperature is measured by exposing a wet sensor, such as a wet cotton wick fitted over the bulb of a thermometer, to the effects of evaporation and convection. The term "natural" refers to the movement of air around the sensor.

Radiation is the transfer of heat energy through space. A worker whose body temperature is greater than the temperature of the surrounding surfaces radiates heat to these surfaces. Hot surfaces and infrared light sources radiate heat that can increase the body's heat load.

Heat-Related Illnesses

Illness as defined by OSHA is generally not instantaneous and occurs some time (hours or days) after the initial exposure to an occupational hazard. For example, an instantaneous reaction such as a burn after touching a hot surface is considered an injury; whereas a delayed reaction to a hot environment such as heat exhaustion that occurs hours after the initial exposure is considered an illness.

Heat collapse is a condition where the brain does not receive enough oxygen because blood pools in the extremities, resulting in a loss of consciousness (fainting or syncope). This reaction is similar to that of heat exhaustion and does not affect the body's heat balance. However, the onset of heat collapse is rapid and unpredictable. Heat syncope is a fainting episode or dizziness that usually occurs with prolonged standing or sudden rising from a sitting or lying position. Factors that may contribute to heat syncope include dehydration and lack of acclimatization.

Heat cramps are usually caused by performing hard physical labor in a hot environment. These cramps have been attributed to an electrolyte imbalance caused by sweating. Cramps can be caused by both too much and too little salt. Cramps appear to be caused by the lack of water replenishment. Because sweat is a hypotonic solution ($\pm 0.3\%$ sodium chloride), excess salt can build up in the body if the water lost through sweating is not replaced. Thirst cannot be relied on as a guide to the need for water; instead, water must be taken every 15 to 20 minutes in hot environments. Under extreme conditions, such as working for 6 to 8 hours in heavy protective gear, a loss of sodium may occur. Recent studies have shown that drinking commercially available carbohydrate-electrolyte replacement liquids is effective in minimizing physiological disturbances during recovery.

Heat exhaustion is a condition with symptoms of headache, nausea, vertigo, weakness, thirst, and giddiness. Fainting associated with heat exhaustion can be dangerous because the victim may be operating machinery or controlling an operation that should not be left unattended; moreover, the victim may be injured when he or she faints. Also, the signs and symptoms seen in heat exhaustion are similar to those of heat stroke, a medical emergency.

Heat fatigue is a temporary state of discomfort and mental or psychological strain arising from prolonged heat exposure. It is generally caused by fluid loss. Workers unaccustomed to the heat are particularly susceptible and can suffer, to varying degrees, a decline in task performance, coordination, alertness, and vigilance. There is no treatment for heat fatigue except to remove the heat stress before a more serious heat-related condition develops. The severity of transient heat fatigue will be lessened by a period of gradual adjustment to the hot environment (heat acclimatization).

Heat rash is "prickly" heat manifested as red papules (i.e., small, inflammatory, irritated spots on skin) and usually appears in areas where the clothing is restrictive. It is the most common problem in hot work environments. As sweating increases, these papules give rise to a prickling sensation. Prickly heat

occurs on skin that is persistently wetted by unevaporated sweat, and heat rash papules may become infected if they are not treated. In most cases, heat rashes will disappear when the affected individual returns to a cool environment.

Heat stroke is a condition when the body's system of temperature regulation fails and body temperature rises to critical levels. This condition is caused by a combination of highly variable factors, and its occurrence is difficult to predict. Heat stroke is a medical emergency. The primary signs and symptoms of heat stroke are confusion, irrational behavior, loss of consciousness, convulsions, a lack of sweating (usually), hot and dry skin, and an abnormally high body temperature (e.g., a rectal temperature of 41°C (105.8°F)). If body temperature is too high, it causes death. The elevated metabolic temperatures caused by a combination of work load and environmental heat load, both of which contribute to heat stroke, are also highly variable and difficult to predict.

HAZARD ASSESSMENT

The Administrator or designee will conduct an initial inspection and hazard assessment of all work areas and environments where hot conditions are anticipated or may occur. He or she will periodically conduct follow-up inspections to ensure compliance with this Plan and to evaluate the effectiveness of heat stress control measures.

During the assessment the inspector will:

- Determine building and facility operating characteristics that may cause, contribute to, or alleviate hot conditions.
- Determine whether engineering and administrative controls are functioning properly
- Verify information obtained from employee interviews
- Perform temperature measurements and make other determinations to identify potential sources of heat stress

Investigators will discuss any operations, which have the potential to cause heat stress with engineers or other knowledgeable personnel. A walk-around inspection will cover all affected areas. Heat sources such as furnaces, ovens, and boilers, and relative heat load per employee will be noted.

Heat Stress Factors

The following workplace factors will be considered in the assessment for heat stress:

- Air temperature
- Radiant heat sources
- Conductive heat sources
- Humidity
- Direct physical contact with hot objects
- Workload activity and duration
- Semi-permeable or impermeable protective clothing

The following worker heat sensitivity factors will also be considered in evaluating the potential for heat stress:

- Age
- Weight
- Degree of physical fitness
- Degree of acclimatization
- Metabolism
- Use of alcohol or drugs
- Medical conditions such as hypertension
- Prior heat injury (predisposes an individual to additional injury)

HEAT STRESS PREVENTION PROGRAM

This Heat Stress Prevention Program describes controls and work practices to protect employees from heat stress while working in hot conditions.

Program Implementation Criteria

The Administrator or designee will implement the Heat Stress Prevention Program when the action levels for hot conditions in the WBGT are exceeded.

Heat Stress Engineering Controls

The following engineering controls will be implemented before and in combination with work practices.

General Ventilation

General ventilation will be used where feasible and practical to dilute hot air with cooler air. Portable or local exhaust systems will be provided for small areas where general ventilation is not feasible or practical. If the dry bulb temperature is higher than 85° F and the air is dry, evaporative cooling may be improved by air movement. When the dry bulb temperature exceeds 85° and the relative humidity is 100%, air movement will make the worker hotter and forced ventilation will not be used to alleviate heat stress.

Fans

Fans will be provided where general ventilation is insufficient or impractical and when evaporative cooling will be improved by air movement.

Air Cooling or Conditioning

Air cooling or conditioning systems will be provided where feasible and practical.

Insulation

Heating pipes will be insulated or otherwise shielded to reduce radiant heat.

Cool Room

Cool rooms will be used as a recovery area near hot jobs.

Heat Stress Prevention Work Practices

Work practices will be implemented to reduce the risk of elevating an employee's core body temperature. Heat stress prevention practices that may be implemented individually or in combination include:

- Employee work and rest intervals
- Continual personal monitoring of physiological signs of heat stress
- Provide cool liquids
- Establish and implement acclimatization schedules
- Use warm-weather cooling garments
- Reduce the physical demands of work, e.g., excessive lifting or digging with heavy objects
- Provide recovery areas such as air-conditioned enclosures and rooms
- Use shifts such as early morning, cool part of the day, or night work
- Use intermittent rest periods with water breaks
- Use relief workers
- Use worker pacing
- Assign extra workers and limit worker occupancy, or the number of workers present, especially in confined or enclosed spaces
- Schedule work in hot conditions for the cooler part of the day
- Schedule routine maintenance and repair work in hot areas for the cooler seasons of the year.

Employee Work/Rest Intervals

The Administrator or designee will determine the work/rest intervals and communicate them to employees by meeting with them in the morning. Work/rest intervals are adjusted throughout the work shift as needed and communicated to each employee at the conclusion of an applicable rest period, prior to reentry into a work area.

Fluid Replacement

Since dehydration is a primary cause of heat illness, employees on each site will be reminded on the importance of liquid consumption. One cup (8 oz) every 20 minutes is recommended. Ample supplies of liquids are available at each site.

- Drinking water will be available to all employees at each site. Employees will have access to drinking water at all sites through school site water fountains and/or water containers. Water in water containers will be refilled with cool water when the water level within a container drops below 50 percent.
- Water will be fresh, pure, and suitably cool and provided to employees free of charge. Supervisors will visually examine the water and pour some on their skin to ensure that the water is suitably cool.
- Water containers will be located as close as practicable to the areas where employees are working to encourage the frequent drinking of water. If field terrain prevents the water from being placed as close as possible to the workers, bottled water or personal water containers will be made available, so that workers can have drinking water readily accessible.
- All water containers will be kept in sanitary condition. Water from non-approved or non-tested water sources (e.g., untested wells) is not acceptable. If hoses or connections are used, they must be governmentally approved for potable drinking water systems, as shown on the manufacturer's label.

- Workers will be reminded daily of the location of the water coolers and of the importance of drinking water frequently. When the temperature exceeds or is expected to exceed 80 degrees Fahrenheit, brief tailgate meetings will be held each morning to review with employees the importance of drinking water, the number and schedule of water and rest breaks and the signs and symptoms of heat illness.
- When the temperature equals or exceeds 95 degrees Fahrenheit or during a heat wave, a pre-shift meeting before the commencement of work to encourage employees to drink plenty of water and remind employees of their right to take a cool-down rest when necessary will be conducted. Additionally, the number of water breaks will be increased.

Personal Protective Equipment

The Administrator or designee will determine the types of PPE that may be used to minimize heat stress after engineering controls and work practices have been implemented and workers are still exposed to heat stress hazards.

Reflective Clothing

Reflective clothing varies from aprons and jackets to suits that completely enclose the worker from neck to feet and can stop the skin from absorbing radiant heat. Because most reflective clothing does not allow air exchange through the garment, the reduction of radiant heat must more than offset the corresponding loss in evaporative cooling. For this reason, reflective clothing should be worn as loosely as possible. In situations where radiant heat is high, auxiliary cooling systems can be used under the reflective clothing.

Wetted Clothing

Wetted clothing is effective when reflective or other impermeable protective clothing is worn. The clothing may be wetted terry cloth coveralls or wetted two-piece, whole-body cotton suits. This approach is effective under conditions of high temperature and low humidity where evaporation from the wetted garment is not restricted.

Shade structures

- Shade structures will be opened and placed as close as practical to the workers when the temperature equals or exceeds 80 degrees Fahrenheit. When the temperature is below 80 degrees Fahrenheit, access to shade will be provided promptly when requested by an employee. **Note:** The interior of a vehicle may not be used to provide shade unless the vehicle is air- conditioned and the air conditioner is on.
- Enough shade structures will be available at the site to accommodate all the employees who are on a break at any point in time. During meal periods there will be enough shade for all of the employees who choose to remain in the general area of work or in areas designated for recovery and rest periods.
- Workers will be informed daily of the location of the shade structures and will be encouraged to take a five-minute cool-down rest in the shade.
- Shade structures will be relocated to follow along with the crew and they will be placed as close as practical to the employees, so that access to shade is provided at all times. All

employees on a recovery, rest break or meal period will have full access to shade so they can sit in a normal posture without having to be in physical contact with each other.

PROCEDURES FOR HANDLING A HEAT WAVE:

“Heat wave” means any day in which the predicted high temperature for the day will be at least 80 degrees Fahrenheit and at least ten degrees Fahrenheit higher than the average high daily temperature in the preceding five days.

- During a heat wave or heat spike, the work day will be cut short or rescheduled
- During a heat wave or heat spike, and before starting work, tailgate meetings will be held to review the District’s heat illness prevention procedures, the weather forecast and emergency response. In addition, if schedule modification are not possible, workers will be provided with an increase of number of water and rest breaks and will be observed closely for signs and symptoms of heat illness.

EMERGENCY RESPONSE

The Administrator or designee will implement the following emergency response procedures for the type of heat stress indicated.

Heat Stroke

If a worker shows signs of possible heat stroke, professional medical treatment will be obtained immediately. The supervisor or co-workers will take the following steps to treat a worker with heat stroke:

1. Call 911 and notify the supervisor.
2. Move the sick worker to a cool, shaded area.
3. Cool the worker using methods such as soaking his or her clothes with water, spraying, sponging, or showering him or her with water, and fanning his or her body.

The worker should be placed in a shady area and the outer clothing should be removed. The worker’s skin should be wetted and air movement around the worker should be increased to improve evaporative cooling until professional methods of cooling are initiated and the seriousness of the condition can be assessed. Fluids should be replaced as soon as possible. The medical outcome of an episode of heat stroke depends on the victim’s physical fitness and the timing and effectiveness of first-aid treatment. Regardless of the worker’s protests, no employee suspected of being ill from heat stroke should be sent home or left unattended unless a physician has specifically approved such an order.

Heat Exhaustion

Heat exhaustion responds readily to prompt treatment. A worker suffering from heat exhaustion should:

- Rest in a cool, shaded, or air-conditioned area.
- Drink plenty of water or other cool, nonalcoholic beverages.
- Take a cool shower, bath, or sponge bath.

Workers suffering from heat exhaustion will be removed from the hot environment and given fluid replacement. They will also be encouraged to get adequate rest.

Heat Syncope (Fainting)

Workers who exhibit signs of heat syncope will be instructed by a supervisor or co-workers to:

- Sit or lie down in a cool place when they begin to feel symptoms.
- Slowly drink water, clear juice, or a sports beverage.

Heat Cramps

Workers with heat cramps should:

- Stop all activity, and sit in a cool place.
- Drink clear juice or a sports beverage.
- Not return to strenuous work for a few hours after the cramps subside, because further exertion may lead to heat exhaustion or heat stroke.
- Seek medical attention if the worker has heart problems, the worker is on a low-sodium diet, or the cramps do not subside within one hour.

Heat Rash

Workers experiencing heat rash will be treated according to the following procedures:

- Directed to work in a cooler, less humid environment when possible.
- Keep the affected area dry.
- Use dusting powder to help increase comfort.

TRAINING

SUPERVISORS:

Supervisors will be trained on their responsibility to provide water, shade, cool-down rests and access to first aid as well as employees' right to exercise their rights under this standard without retaliation.

Supervisors will be trained in appropriate first aid and/or emergency responses to different types of heat illness, and in addition, that heat illness may progress quickly from mild symptoms and signs to serious and life-threatening illness.

Supervisors will be trained on how to track the weather at the job site (by monitoring predicted temperature highs and periodically using a thermometer). Supervisors will be instructed on how weather information will be used to modify work schedules, to increase number of water and rest breaks or cease work early if necessary.

All employees who are exposed or potentially exposed to heat stress will receive training regarding heat stress-related injuries and illnesses and prevention measures at the time of assignment to work activities that involve hot conditions.

The following topics will be covered during safety training for heat stress:

- Knowledge of the hazards of heat stress, including environmental factors that might contribute to the risk of heat-related illness (temperature, humidity, radiant heat, air movement, conductive heat sources, workload activity and duration, and personal protective equipment)
- Recognition of predisposing factors, danger signs, and symptoms (e.g., age, degree acclimatization, medical conditions, consuming alcohol, caffeine use, nicotine use, and use of medications that affect the body's response to heat)
- The importance of frequent drinking of small quantities of water
- The importance of shade and cool down break
- Awareness of first-aid procedures for heat stroke and other heat stress-related illnesses
- The procedure for reporting signs and symptoms of heat-related illness in themselves and co-workers
- Employee and supervisors responsibilities in avoiding heat stress
- Use of protective clothing and equipment, including the importance of removing heat-retaining PPE, such as non-breathable chemical resistant clothing, during breaks
- First aid and other emergency response procedures

Refresher Training

Personnel covered by this Plan will receive refresher heat stress training at least once per year, and whenever there is a change in work assignment or hot conditions, or when a new heat source is introduced to a work area.

RECORDKEEPING

Heat stress-related illnesses that are relieved by first aid and do not require additional medical treatment will not be recorded in injury and illness records.

Heat stress-related illnesses that require medical treatment beyond first aid will be recorded as an illness or injury and illness record keeping forms. For example, the administration of fluids by intravenous injections is record-able as medical treatment, and more serious cases of heat disorders involving such injections will be entered into the injury and illness records.

In addition, any diagnosis by a physician or other licensed healthcare professional of heat syncope (fainting due to heat) will be recorded.

Addendum C-19

COVID-19

[COVID-19 Prevention Non-Emergency Regulations](#)

On December 15, 2022, the Occupational Safety and Health Standards Board voted to adopt non-emergency COVID-19 prevention regulations. These regulations took effect on February 3, 2023 and will remain in effect for two years after the effective date, except for the recordkeeping subsections that will remain in effect for three years.

These regulations include some of the same requirements found in the COVID-19 Prevention Emergency Temporary Standards (ETS), as well as new provisions aimed at making it easier for employers to provide consistent protections to workers and allow for flexibility if changes are made to guidance in the future from the California Department of Public Health.

[Public Health Guidance for K-12 Schools and Child Care Settings to Support Safe In-Person Services and Mitigate the Spread of Communicable Diseases, 2023-2024 School Year](#)

This guidance is intended to support safe, in-person learning and care in K-12 schools, child care, and related settings by mitigating the spread of communicable diseases.

The guidance builds upon a multi-layer strategy used to manage COVID-19 and serves as a general prevention framework to reduce the spread of multiple types of infections, including COVID-19, influenza, respiratory syncytial virus (RSV), and norovirus. Strategies are guided by the principle that safe, in-person learning, and care are critical to the well-being and development of children
